Mac OS 10.3.9

2GB hard disk space

Minimum 1GB of RAM (2GB recommended)

How to download the software

To download the Family Photo Book software, visit the Family Photo Book website and go to the "Free Software" page. Provided are versions for either Windows and Macintosh OSX

Installing and using Family Photo Book software

Installation

Windows PC installation

Double-click on the installer. Select the language you would like to use and then follow the wizard steps to install the software. When the installation is complete, a Family Photo Book icon will appear on your desktop.

Apple Mac installation

Double-click on the installer. Select the language you would like to use and then follow the wizard steps to install the software. When the installation is complete, the program can be accessed from within the Applications folder.

Family Photo Book
2.5.0.exe

Using Family Photo Book for the first time

On a PC, double-click on the Family Photo Book icon on your desktop, or select Family Photo Book from your Start menu.

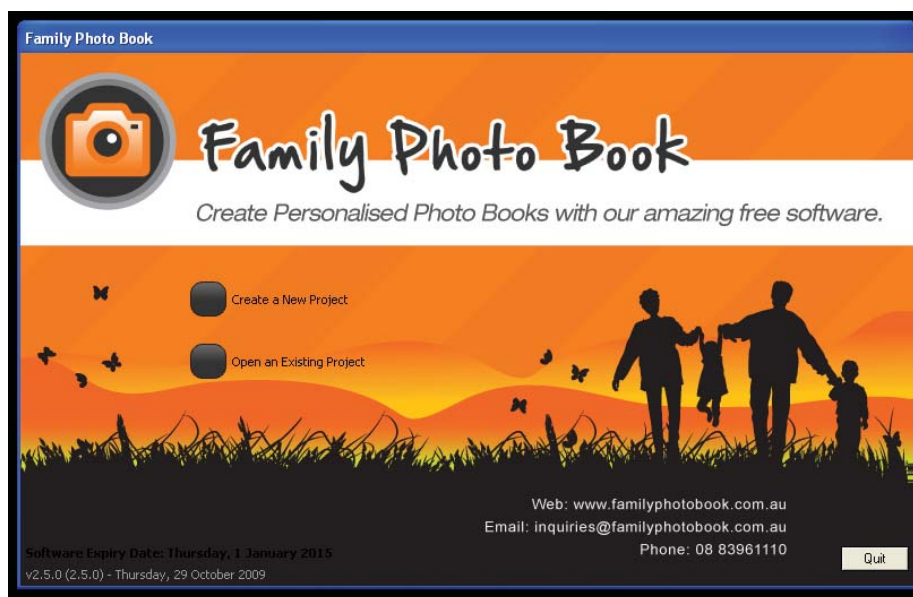

On a Mac you will find the software in your Applications folder.

Note: You may experience a pause when the software is opened for the first time as the software is configured for your system.

You will now be presented with the Family Photo Book welcome screen.

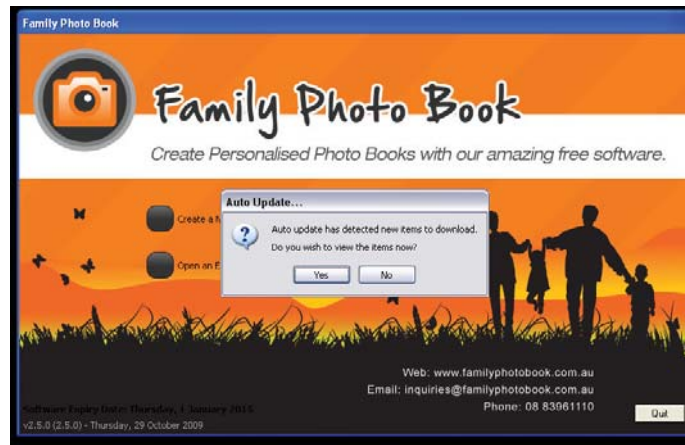

Family Photo Book

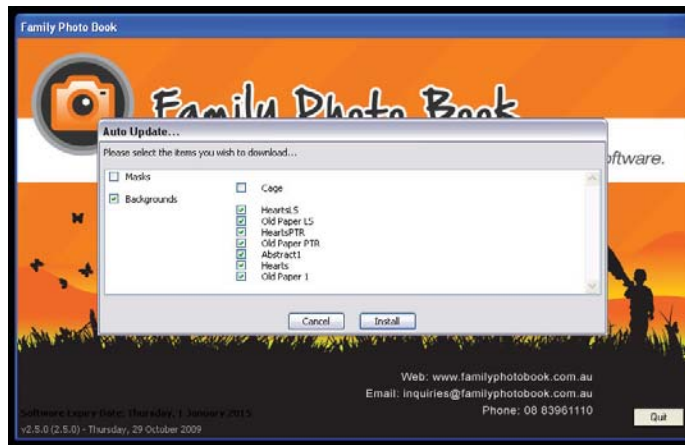

Enabling and Using Auto-Updates

An on-screen prompt will pop-up and ask whether you wish to enable Auto-Updates. Auto-Updates allow you to add new products and styles to your installation. **We recommend that you do allow Auto-Updates**, though you can elect to update manually if you wish.

If you accept Auto-Updates, you will be presented with a new pop-up that will advise you that "Auto Update has detected new items to download. Do you wish to view the items now?"

If you wish to use only the products that have downloaded within the software, click the No button to proceed to the next step. If you click "Yes", you will now see a new pop-up with a list of products and resources that are available for download. To download any of the items, simply click the tick box next to it to place a green tick in the box. Once you have selected the items you wish to download, click the "Install" button to download the products. **From time to time you may see the option to download an update for "Application", we highly recommend for you to download this as it is normally an upgrade for the software.**

Downloading many items may take some time (depending on your Internet connection speed) so you may wish to download just a few to begin with. You can add other items at any time by clicking the "Check for Updates button" on the New Project screen. Once the download has completed, click the "Finish" button.
